## WATER TANKS

In the present scenario, water is becoming a very scarce commodity and we should take all measures to store and use it religiously. Considering all this, At MACON PRECAST, we are offering this product.

- The sizes of the tanks have been designed keeping in mind the need for erecting the tanks in congested areas and places with very less clearance.
- These tanks have also been priced in a manner that it is lower than the cost of the conventional tank.

## Here are some common applications and places where RCC readymade water tanks are used:

**Residential Buildings:** RCC readymade water tanks are commonly used in residential complexes, apartments, and individual houses to store water for domestic use, such as drinking, cooking, bathing, and cleaning.

**Commercial Buildings:** Many commercial establishments, including offices, hotels, restaurants, and shopping malls, use these water tanks to ensure a steady supply of water for their daily operations.

**Industries:** Factories and industrial facilities often require large volumes of water for manufacturing processes, cooling systems, and other industrial needs. RCC readymade water tanks can efficiently store water for industrial purposes.

**Educational Institutions:** Schools, colleges, and universities use these tanks to store water for various requirements within the campus.

**Hospitals and Healthcare Facilities:** RCC readymade water tanks are utilized in medical facilities to store water for sanitary purposes and medical procedures.

**Municipalities and Government Buildings:** These tanks are used by municipalities and government establishments to store water for public use, fire fighting, and other municipal activities.

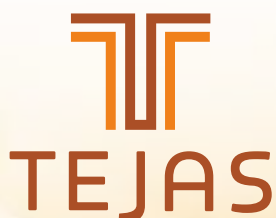

**Agriculture:** In rural areas and agricultural settings, these tanks are employed to store water for irrigation, livestock, and other agricultural activities.

**Resorts and Recreational Facilities:** Tourist resorts, amusement parks, and recreational centers often use RCC readymade water tanks to ensure a continuous water supply for their guests.

**Construction Sites:** Construction sites utilize these tanks to store water for construction activities and for the needs of the workforce.

**Emergency Water Supply:** In areas prone to water shortages or disasters, RCC readymade water tanks can serve as emergency water storage solutions.

RCC readymade water tanks come in various capacities and designs, ranging from small overhead tanks to large underground reservoirs. The choice of tank size and type depends on the water demand of the location and the available space for installation. It's essential to follow local regulations and standards while installing and using RCC readymade water tanks to ensure the safety and longevity of the water storage system.
